

ABILASH MUNDLUR

Senior Full Stack Software Engineer

Dallas, TX | abhimundlur@gmail.com | (980) 888-6622 | abilashmundlur.com | github.com/abhi6268

PROFESSIONAL SUMMARY

Senior Full Stack Software Engineer with 7+ years architecting and shipping secure, n-tier enterprise applications across the full SDLC. Deep expertise in C#/.NET (ASP.NET Core, .NET Web API) on the backend paired with React 18+, TypeScript and Material UI on the frontend, building component-driven interfaces backed by REST and GraphQL APIs. Strong track record designing distributed systems, integrating external APIs and vendor platforms, optimizing relational data layers (SQL Server, PostgreSQL, MySQL) and driving CI/CD excellence with automated unit, integration and end-to-end testing. Comfortable in regulated, security-first environments, implementing OAuth2/JWT/SAML auth, role-based access control and security-first coding standards to protect sensitive data. Proven mentor and code reviewer who translates business requirements into intuitive technical solutions and clearly communicates with non-technical stakeholders.

TECHNICAL SKILLS

Languages & Frontend: C#, TypeScript, JavaScript (ES6+), Python, React 18+, Next.js, Angular, Redux, Material UI (MUI), Ant Design, Tailwind CSS, SASS/LESS, HTML5, CSS3, Responsive & Cross-Browser Design

Backend & APIs: ASP.NET Core, .NET Web API, Entity Framework, Node.js, Express.js, Python (FastAPI, Django), REST APIs, GraphQL, SOAP, Microservices, Event-Driven Architecture, API Gateway, Vendor/3rd-Party Integrations

Auth & Security: OAuth2, JWT, SAML, Azure AD, Role-Based Access Control, Secure Coding Standards, Token Management, Data Protection in Regulated Environments

Databases: SQL Server, PostgreSQL, MySQL, MongoDB, SQL Optimization, Composite Indexing, Query Restructuring, Data Modeling, Schema Evolution, Entity Framework, Django ORM, SQLAlchemy

Cloud & DevOps: Microsoft Azure (App Services, Functions, DevOps, AD), Docker, Kubernetes, CI/CD Pipelines, Cloud-Native Application Development, Distributed Systems, High Availability, Serverless Patterns, Infrastructure as Code concepts

Testing & Tooling: Jest, Cypress, Jasmine, Mocha, xUnit, Postman, Swagger/OpenAPI, Unit / Integration / End-to-End Testing, Git, GitHub, GitLab, Bitbucket, Jira, Webpack, Vite

Practices: Agile/Scrum, System Design, Code Reviews, Mentoring, Technical Documentation, Debugging & Production Support, Security-First Development

PROFESSIONAL EXPERIENCE

Full Stack Software Engineer | Ziosk | Plano, TX

June 2024 – Present

- Architect and ship secure, n-tier enterprise applications combining C#/ASP.NET Core backend services with React 18+, TypeScript and Material UI (MUI) frontends, deployed across 3,000+ restaurant locations and processing 500K+ daily transactions.
- Design and integrate REST and GraphQL APIs connecting internal systems, external vendor platforms (POS, payments, loyalty) and analytics pipelines, defining clear contracts and resilient error handling across service boundaries.
- Build component-based UIs in React 18 + TypeScript + MUI with reusable design-system components, client-side routing, form validation, caching and real-time state translating business requirements into intuitive, accessible interfaces.
- Reduced API response time by 35% through composite indexing, SQL query restructuring, .NET Web API filter optimization and ORM-layer tuning against SQL Server and PostgreSQL data stores.
- Drove CI/CD excellence through Azure DevOps pipelines with Dockerized builds, automated unit, integration and end-to-end test suites (xUnit, Jest, Cypress) and security-first coding standards reviewed in every PR.
- Mentor engineers, lead code reviews and maintain clear technical documentation; established org-wide standards for component architecture and testing strategy that reduced onboarding time by ~40%.
- Partner directly with business stakeholders, QA and solution engineers to translate complex requirements into technical stories, define acceptance criteria and clearly communicate trade-offs to non-technical audiences.
- Analyze recurring production incidents and identify automation opportunities instrumenting logging, alerting and self-healing patterns that improved production stability and operational efficiency.

Senior Frontend Engineer | Verizon | Irving, TX*February 2022 – June 2024*

- Drove architecture for React and TypeScript-based component platforms supporting 100K+ concurrent users on internal and customer-facing products, maintaining 99.9% uptime SLAs in a regulated telecom environment.
- Served as full-stack technical lead in cross-functional system design, defining REST and GraphQL API contracts, relational data models (SQL Server, PostgreSQL, MySQL) and schema evolution strategies in partnership with backend and product teams.
- Extended ASP.NET Core / .NET Web API services with Entity Framework data layers, Web API filters, structured error handling and dependency injection enabling end-to-end full-stack feature delivery across the team.
- Led migration to micro-frontend architecture using NX monorepo tooling, decomposing a monolithic app into independently deployable modules with lazy-loaded routing and shared component libraries reducing bundle size by 20%.
- Delivered WCAG 2.1 AA compliant responsive UIs using Material UI with TypeScript and SASS, including real-time data transformation, client-side pagination and filtering across large datasets.
- Improved release reliability through Cypress and Jest coverage, Dockerized builds and Azure DevOps CI/CD automation, cutting production incidents and shortening lead time to deploy.
- Mentored mid-level engineers, ran weekly code review and architecture sessions, and authored internal documentation and runbooks adopted across multiple product squads.

Frontend Engineer | Impossible Foods | Atlanta, GA*August 2021 – February 2022*

- Built responsive React + TypeScript web applications with reusable component libraries, centralized state management and client-side routing, accelerating feature delivery across the engineering team.
- Integrated REST APIs with OAuth/JWT authentication, implementing client-side caching, optimistic UI patterns and cross-browser performance tuning to maintain fast, reliable user experiences.
- Optimized frontend rendering through virtual scrolling, memoization and render-cycle profiling, eliminating unnecessary re-renders and improving Time-to-Interactive across high-usage workflows.

Software Engineer | Chakravyuha Technologies | India*January 2019 – May 2021*

- Built component-based web applications with centralized state management and reusable UI libraries, collaborating with backend teams on REST API contracts and consistent cross-browser data presentation.
- Implemented form validation, error boundary handling and structured user feedback patterns, improving application reliability across high-traffic production workflows.
- Reduced initial page load time by 25% through code splitting, lazy loading and targeted frontend performance tuning across production deployments.

EDUCATION

Master of Science, Business Analytics | Texas A&M University–Commerce | 2022**Bachelor of Engineering, Computer Science** | Visvesvaraya Technological University, India | 2018**CERTIFICATIONS**

Meta Full Stack Developer Certificate | Meta (Coursera) | 2026**ADDITIONAL INFORMATION**

Work Authorization: U.S. Permanent Resident (Green Card holder) authorized to work without sponsorship.**Relocation:** Open to relocation.**Strengths:** Strong analytical and debugging skills; comfortable navigating regulated industry environments; effective communicator across technical and business teams; experienced mentoring engineers and leading code reviews.
